AND AVAILABILITY!**

Delivering minute-of-angle (MOA) accuracy, high capacity, and proven durability, this weapon is ideal for situations which require highly accurate, sustained, controlled fire. Past applications of this weapon are on vehicles in a remote weapons station.

The M240-SLR is dimensionally identical to the M240, and is able to integrate into any M240 mounting system. The most noticeable difference between the M240-SLR and the M240 machine gun is that the SLR fires from a closed bolt. Many of the internal parts of the firearm have been redesigned, introducing an entirely new breed of M240.

The accuracy gained from the closed bolt system combined with the controllability of the semi-automatic fire mode, and large ammunition capacity, means this is a great choice for defensive positions and security checkpoints where collateral damage is of great concern.

The bolt and trigger groups are new and not interchangeable with the original M240. These new internal parts are all manufactured by OOW at our ISO certified facility where we are able to ensure that quality meets our stringent standards. Our barrels are manufactured completely in house and are proof fired, magnetic particle inspected, and tested for function and accuracy.

While the internal mechanism of the firearm has been redesigned, we've kept it simple. The M240-SLR requires only two tools to break it down. All other actions such as barrel changing, loading, feed cover functions, etc. remain the same as the original M240.

In field tests, using match ammunition, a randomly chosen weapon effortlessly produced 1 MOA groups at 100 yards. In both single and rapid fire (400 rpm) tests, absolutely no malfunctions were experienced with the gun.

This is a true testament to it's superb engineering.

| Weapon Specifications: | |
|-------------------------|---|
| Caliber: | 7.62x51mm NATO |
| Barrel: | CMV Steel |
| Barrel Length: | 24 Inches (with Flash Hider) |
| Barrel Twist: | 1/12 |
| Muzzle Thread: | .7812-24 |
| Finish: | Phosphate |
| Operation: | Gas Operated, Closed Bolt, Semi-Automatic |
| Feed: | M13 Link, Right or Left Feed with change of Top Cover and Feed Tray |
| Weight: | 19.4lbs |
| Overall Length: | 49 inches (with Flash Hider) |
| Sights: | Peep type rear with elevation from 200-1800 meters; Blade front sight with adjustments for windage and elevation, MIL-STD-1913 rail on Feed Cover |
| Max Effective Range: | 800 meters (Bipod); 1,100 meters (Tripod); 1,800 meters (Suppression) |
| Rate of Fire: | 400 rpm (approx) |
| Max Range: | 3,725 meters |
| Patent #US 7,950,178 B1 | |
